

Job Security and New Restrictive Permanent Contracts. Are Spanish Workers More Worried of Losing Their Job?

Elisabetta Trevisan

CCP (Aarhus School of Business) & Department of Economics,
Ca' Foscari University Venice

Mannheim - 27-28 October 2006

What we know

- ▶ **Increasing importance** of the concept of job security.
 - ▶ Clark (1997,1998), Clark et al. (1996,2001)
 - ▶ Givord and Maurin (2003)
- ▶ **Relationship** between the institutional characteristics of the labor market and the perceived job security.
 - ▶ Campbell et al. (2004)
 - ▶ Green et al. (2001), Green (2003)
 - ▶ Clark and Postel-Vinay (2005)
- ▶ The 1997's reform is not a reform **at the margin**
 - ▶ Dolado (2001), Arellano (2004)
- ▶ It is a **natural experiment**
 - ▶ Kugler et al. (2003)

What we want to do

- ▶ **Question** - If job security and EPL are linked, are the changes in institutional regimes going to affect the level of job security?
- ▶ The **aim** of this paper is then to evaluate the impact of a reform of Spanish labor market on the perceived job security of the workers.

What we want to do

- ▶ **Question** - If job security and EPL are linked, are the changes in institutional regimes going to affect the level of job security?
- ▶ The **aim** of this paper is then to evaluate the impact of a reform of Spanish labor market on the perceived job security of the workers.

What we want to do

- ▶ **Question** - If job security and EPL are linked, are the changes in institutional regimes going to affect the level of job security?
- ▶ The **aim** of this paper is then to evaluate the impact of a reform of Spanish labor market on the perceived job security of the workers.

Two main steps

- ▶ **1984** - liberalization of fixed term contracts.
 - ▶ **Large increase** in the use of fixed term contracts.
 - ▶ **Middle 90s** - $\frac{1}{3}$ of Spanish employees worked under temporary contracts; 90% of new signed contracts was temporary.
- ▶ **1997** - introduction of new permanent contract with lower firing costs and pay-roll taxes.

Two main steps

- ▶ **1984** - liberalization of fixed term contracts.
 - ▶ Large increase in the use of fixed term contracts.

- ▶ **1997** - introduction of new permanent contract with lower firing costs and pay-roll taxes.

The 1997 reform

- ▶ It reduces dismissal costs for unfair dismissal by 25% and pay-roll taxes between 40% and 90%.
- ▶ It applies to newly signed contracts or conversion of temporary into permanent contracts for:
 - ▶ Workers under 30 years of age
 - ▶ Workers over 45 years of age
 - ▶ Long term unemployed
 - ▶ Women under-represented in their occupations
 - ▶ Disabled workers

The 1997 reform

- ▶ It reduces dismissal costs for unfair dismissal by 25% and pay-roll taxes between 40% and 90%.

Propensity Score Matching DID

- ▶ **Why?** - It reduces the heterogeneity of the treatment and the control groups and make them **comparable**
- ▶ **How it works**
 - ▶ Obtain the propensity score and identify for each treated all non treated who match on the propensity score year by year;
 - ▶ Calculate before-after differences for each participants and non participants;
 - ▶ Evaluate the differences-in-differences

Propensity Score Matching DID

- ▶ **Why?** - It reduces the heterogeneity of the treatment and the control groups and make them **comparable**

Concluding Remark

- ▶ We try to estimate the effect of introduction of new restrictive permanent contract on the perceived job security of the workers.
- ▶ **Propensity score matching DID:**
 - ▶ We could individualize an effect only for worker with less than 30 years of age.
 - ▶ The effect is positive if compared with the first control group (i.e. permanent workers with less than 30 years of age), negative in the second comparison.
 - ▶ The positive effect is increasing over time, the negative one is decreasing.
- ▶ **Within estimator:**
 - ▶ The effect is positive in both comparisons.
 - ▶ The effect is higher in the comparison with the temporary workers with age between 30 and 36.

Concluding Remark

- ▶ We try to estimate the effect of introduction of new restrictive permanent contract on the perceived job security of the workers.
- ▶ **Propensity score matching DID:**
 - ▶ We could individualize an effect only for worker with less than 30 years of age.

- ▶ **Propensity score matching DID:**
 - ▶ We could individualize an effect only for worker with less than 30 years of age.
 - ▶ The effect is positive if compared with the first control group (i.e. permanent workers with less than 30 years of age), negative in the second comparison.
 - ▶ The positive effect is increasing over time, the negative one is decreasing.
- ▶ **Within estimator:**
 - ▶ The effect is positive in both comparisons.
 - ▶ The effect is higher in the comparison with the temporary workers with age between 30 and 36.

Concluding Remark

- ▶ We try to estimate the effect of introduction of new restrictive permanent contract on the perceived job security of the workers.
- ▶ **Propensity score matching DID:**
 - ▶ We could individualize an effect only for worker with less than 30 years of age.
 - ▶ The effect is positive if compared with the first control group (i.e. permanent workers with less than 30 years of age), negative in the second comparison.

 - ▶ The effect is positive in both comparisons.
 - ▶ The effect is higher in the comparison with the temporary workers with age between 30 and 36.

Work to do...

- ▶ Some more robustness checks: male vs female, blue-collar vs white-collar.
- ▶ Verify the existence of heterogeneity over time.
